Professional Summary

I am a Senior at the University of North Texas pursuing a Bachelor of Science in Computer Science. I have held a position in the hospitality and service industry for over four years engaging in customer satisfaction, quality assurance, and problem solving. In the future, I intend on pursuing front-of-the-line challenges in the various applications of software development as I gain both educational and professional experience. Recently, I have introduced myself to the basics of AWS and database management. Most of my experience comes from educational and personal projects with programming languages such as Java, C, C++, and C#. I have experience with GitHub, the concepts and applications of CI/CD, and some development centric tools. I have also recently begun to learn JavaScript, HTML, CSS, and most things web development related. My earliest experiences with software development are from self-inspired curiosity in the sophomore year of high school. Because of this curiosity, I believe that ambition and persistence is important in learning through any challenge.

Relevant Skills
